Description

Greenhouse STRONG is designed for creation microclimate favorable for growing garden crops on cottage and household plots. Greenhouse might have variable length depending on customers' desire. Required length of greenhouse is provided by purchasing of packages with extending inserts. Each insert adds 2m to base length. Base length is 4m. Height of installed frame is 2.1 m.

The frame of the greenhouse is made of galvanized iron and is to be assembled with screws and angles. Complete set includes all that is needed for fastening of coverage. Greenhouse may be completed with coverage on buyer's request. Greenhouse has two door openings and two small windows in opposite ends.

Greenhouse base requires 3 sheets of cellular polycarbonate 2.1*6m with 4mm thickness. For each Inserts - 1 sheet of cellular polycarbonate 2.1*6m.

Perform assembling and operation of the greenhouse in strict accordance with the manual and operating rules stated in the technical certificate. Please keep this technical certificate for further reference.

Operation rules

Before the start of operation, the greenhouse should be assembled and installed as prescribed in the manual. When the greenhouse is assembled by a third party the customer should supervise the quality of works to ensure compliance with the present manual. Some detail have extra holes due to uniformity of details. During assembly, be careful not to damage the parts, because until they have a diameter of 4mm or mandrel with a conical end. During assembly of the frame details' connections, be sure to follow assembly rules and cause of removal warranty support by manufacturer.

Do not install the greenhouse too close to buildings or trees where masses of snow/ice can fall on it. Recommended distance is at least 2 m. The greenhouse is designed to withstand wind at the speed below 24 m/sec. The greenhouse cladding should not be removed for the winter period if snow load is limited. If the greenhouse is left unattended for the entire winter the customer should either remove the cladding or estimate the possible snow load. For the frame assembled with all parts including strainers and braces, the maximal snow load begins when the layer of snow weight is 180 kg per 1 sqm of horizontal surface, which corresponds to regulative snow load of IV snow region (in accordance against snow load in the following areas: Northern areas in Russia, the Scandinavian countries: Finland, Sweden, Norway, Denmark).
The company reserves the right to make changes in the greenhouse design

Warranty liabilities

1. The manufacturer is responsible for the completeness of the product.
2. The manufacturer is responsible for assemblability of the greenhouse in accordance with the instructions.

Term for making claims is 24 months from the day of purchase

Terms of warranty provisions

1. Greenhouse installation in violation of instruction requirements
2. Violation of the rules of operation.
3. Inappropriate use of the greenhouse.
4. Deformation of the greenhouse as a result of ground movement.
5. Floods, hurricanes and other natural disasters.

Cleaning and washing sheets of polycarbonate.

Warranty does not apply to cases of:

1. Rinse the sheet with warm water.
2. Wash the sheet with a solution of mild soap or with a household detergent and warm water, using a soft rag or a sponge to remove dirt.
3. Rinse with cold water and wipe with a soft cloth.

Never use abrasives or highly alkaline cleaning compositions for cleaning polycarbonate sheets. Dry rubbing of the surface will damage the protective layer of the cladding and shorten its shelf life. Never rub the surface of polycarbonate sheets with brushes, metallic cloth or other abrasive materials.

When disinfecting the greenhouse from pathogens causing fungal and bacterial diseases, do not use «sulfur blocks» to avoid frame corrosion (blackening).

Cellular polycarbonate shall be installed strictly defined side out (towards the sun), which has a protective layer. The protective layer is usually at the side with the inscriptions on the transport film. The film on the other side of sheet is transparent. After marking the sheet, but prior to its cutting, make a mark on the protected side of the sheet for each piece: after removal of the transport film sheet sides are not visually different. The transport film is stripped from both sides immediately before fixing the cladding on the frame.

Sections of polycarbonate with open honeycombs should be covered by adhesive tape.
Cellular polycarbonate shall be installed strictly defined side out (towards the sun), which has a protective layer.
