**Manual Part 2  
Safety Advice**

## **Attention!**

In some countries you may need a permit when you want to set up a portable garage/garage tent of a certain size – normally larger than 50 m<sup>2</sup>. It is your responsibility to comply with local rules and regulations and to ensure that the portable garage is assembled correctly according to the enclosed manual. It is very important that you assemble all parts according to the instructions and fasten the portable garage/garage tent with the enclosed ground pegs or similar equipment. Do not skip any parts or any steps.

## **Weather conditions and Safety Packs**

Never set up a portable garage/garage tent in bad weather or when it is windy. Check the weather forecast before you start setting up the structure. In case of bad weather conditions, it is your responsibility to ensure that the portable garage/garage tent is safely secured or taken down so the structure cannot cause damage to persons, buildings, and more.

Use storm straps and ground pegs – like our Safety Packs - to secure the structure whether it is going to be in use for a short or long period. Do not use open fire, welding equipment or other sources, which can ignite, inside or close to the tent. Never stay inside the portable garage/garage tent during extreme weather conditions!

## **Portable garages and garage tents are temporary structures**

All our portable garages and garage tents are temporary structures intended for interim storage only. In short, they are strong and sturdy structures, which will provide shelter for your stored cars and more, but our portable garages and garage tents are not permanent buildings so it is up to you to secure the structure and currently make sure that the structure is safe and in good condition.

## **Insurance**

Make sure to check whether your portable garage/garage tent is covered by your home contents insurance or similar.

## **Attention to snow and rain**

In the event of snow always be sure to remove snow from the roof of the structure regularly to prevent snow from building on the roof as heavy snow can cause the portable garage/garage tent to collapse.

In the event of rain, there is a risk of water assembling on top of the portable garage/garage tent. Heavy puddles of water may cause the portable garage/garage tent to collapse. It is your responsibility to ensure that water do not assemble on top of the tent by keeping the cover taught at all times and remove water if it assembles anyway. Make sure that the cover is stretched out properly over the frame all the time.

## **Condensation inside your portable garage or garage tent**

You may experience condensation inside your portable garage/garage tent. Temperature changes and moisture in the air can cause dew or condensation to appear outside and inside a portable garage/garage tent. This is normal and does not mean the tent is leaking.

Do not unpack or repack your portable garage/garage tent in temperatures below zero as it may cause the cover material to break or get damaged. If you have to work with the portable garage/garage tent in sub-zero degrees, you must pack the tent indoor. You also have to make sure that the tent/shelter is completely dry before folding it together or you may risk that mildew will develop while the tent is in storage.

**Warranty information**

Dancover warranty applies only to the normal use of the product, normal wear and tear excepted, in accordance with written use instructions or manual. The warranty does not apply to damage caused by accident, abuse, misuse, or modification of the product. If you need to clean the cover of your portable garage/garage tent at some point, only use a mild detergent and lukewarm or cold water. Do not use strong agents of any kind.
